

BEEFMASTER GRASS TETANY BLOCK

AVAILABLE IN 15 & 40KG BLOCKS

A supplement containing high levels of magnesium (11%) and essential trace minerals. This block aids in the prevention of grass tetany.

Grass Tetany is a condition that can effect stock in late autumn, winter and spring. It can cause significant losses in production, even when there are no signs of illness. Grass tetany (also called grass staggers) occurs when animals are grazing pasture which has low available levels of magnesium, or as a result of increased body demands for magnesium during lactation or late pregnancy.

Prevention is preferable to treatment as grass tetany often occurs without warning. Prevention involves supplementing the animals with magnesium during the period of greatest risk. Olsson's Beefmaster is the supplement to eliminate the deficiency with 111g/kg of available magnesium.

APVMA Approval No. 40029/15/0905

Storage Instructions:

Store out of direct sunlight and under cover. Store below 30°C (room temperature).

DIRECTIONS FOR USE

Cattle/Sheep/Goats: Feed on ad-lib basis

Remove outer carton and plastic cover and place blocks near water troughs, dams, pads and stock camps. The cardboard container is edible. Replace blocks as soon as they are consumed.

TYPICAL ANALYSIS

Magnesium (Mg)	11.1%	Phosphorus (P)	0.11%
Magnesium Oxide (MgO)	18.9%	Molasses	59.77%
Salt (NaCl)	0.32%	Cottonseed Meal	0.39%
Calcium (Ca)	0.21%
