

EWELITTLE BEAUTY

AVAILABLE IN 15KG BLOCKS

A high-energy block formulated for breeding ewes, designed to support energy levels and nutritional requirements during pregnancy.

PREVIOUSLY KNOWN AS LAMB LI. Late-pregnant sheep and goats on poor-quality dry feed may have reduced feed intake and limited glucose precursors. The increased energy demand from the developing lamb affects the ewe's glucose availability. Olsson's Ewe Little Beauty Pre-Lambing is a block containing molasses, glycerol, magnesium and other nutrients, formulated for use in late pregnancy. Available with 20% glycerol. Feed on an ad lib basis year-round in conjunction with Ewe Beauty 365.

Storage Instructions:

Store out of direct sunlight and under cover. Edible carton and packaging. Avoid contact with skin and eyes.

DIRECTIONS FOR USE

Feed on an adlib basis year-round in conjunction with Ewe Beauty 365 to support optimal ewe and goat health. Add Ewe Little Beauty 2-4 weeks prior to lambing. Blocks are best placed under trees, away from water troughs and dams to encourage pasture grazing. Consumption will vary depending on nutritional requirements, time of year & available feed.

TYPICAL ANALYSIS

Bypass Protein Meal	6%	Magnesium (Mg)	4%
Calcium (Ca)	5.1%	Molasses	Min. 45%
Phosphorus (P)	1.7%	Glycerol	20%
Salt (NaCl)	4%	Selenium	26mg/kg
